TWELFTH ANNUAL REPORT

RELATING TO THE

REGISTRATION AND RETURN

OF

BIRTHS, MARRIAGES, DIVORCES, AND DEATHS

IN NEW HAMPSHIRE,

FOR THE YEAR 1891.

VOLUME IX.—NEW SERIES.

CONCORD:

IRA C. EVANS, PUBLIC PRINTER.

1893.

1991

THE STATE OF NEW HAMPSHIRE.

OFFICE OF THE REGISTRAR OF VITAL STATISTICS,

CONCORD, November 2, 1892.

To His Excellency the Governor and the Honorable Council:

I have the honor to submit herewith, in accordance with the laws of the State of New Hampshire, the twelfth annual report relating to the registration of births, marriages, divorces, and deaths in this State for the year ending December 31, 1891.

The number of births reported in the State for the year 1891 was 7,510, or 564 more than was reported in 1890; the number of marriages was 3,904, or 283 more than was returned in 1890; the number of deaths was 7,310, or 58 less than in 1890.

The total population of the State, according to the census of 1890, is 376,530, and the proportion of births, marriages, and deaths to each one thousand of the population is as follows:

Birth-rate, 19.94; marriage-rate, 10.36 (couples); divorce-rate, 1.01; death-rate, 19.41.

The returns of marriages, divorces, and deaths may be regarded as correct; those of births defective.

The tables have been arranged substantially as in the last registration report.

Reference should be had to the index at the end of this volume for any subject included in this report.

Respectfully submitted,

Irving A. Watson
Registrar of Vital Statistics.

TABLE No. I.

SUMMARY OF REGISTRATION REPORT.

The following summary of observations is intended to present in a concise form a brief review of some of the more important facts shown by the registration of births, marriages, divorces, and deaths in the State of New Hampshire for the year 1891.

There were reported for the year 7,510 births, 3,904 marriages, and 7,310 deaths. The rates for the year are as follows :

Birth-rate . . .	19.94 to 1,000 of the population.
Marriage-rate . . .	9.61 " " "
Persons married . . .	19.22 " " "
Death-rate . . .	19.56 " " "

TABLE No. 1.
Population of Counties in 1880 and 1890.

COUNTIES.	1880.	1890.
Rockingham	49,064	49,650
Strafford.....	35,558	38,442
Belknap	17,948	20,321
Carroll	18,224	18,124
Merrimack.....	46,300	49,435
Hillsborough.....	75,634	93,247
Cheshire.....	28,734	29,579
Sullivan	18,161	17,304
Grafton	38,788	37,217
Cochs	18,580	23,211
Total.....	346,991	376,530

TABLE No. 2.

*Population of New Hampshire for each Year from 1880 to 1891, inclusive.**

YEARS.	Population.	YEARS.	Population.
1880.....	346,991	1886.....	364,767
1881.....	349,952	1887.....	367,728
1882.....	352,913	1888.....	370,689
1883.....	355,874	1889.....	373,650
1884.....	358,845	1890.....	376,530
1885.....	361,806	1891.....	379,491

* Population estimated for all but census years.

The increase of the population of the State has been of very nearly even growth, hence by averaging the increase we are able to present a table showing the yearly population of the State from 1880 to 1891, inclusive. It is believed that this table is very nearly correct.

TABLE No. 3.

*Births, Marriages, and Deaths, with the Population and Rates, for 1884 to 1891, inclusive.**

YEARS.	Population.	Births.	Marriages.	Deaths.	Birth-rate per 1,000.	Persons married to 1,000.	Death-rate per 1,000.
1884.....	358,845	6,247	3,292	6,194	17.40	18.34	17.26
1885.....	361,806	6,319	3,180	6,201	17.46	17.56	17.13
1886.....	364,767	6,657	3,324	6,426	18.24	18.22	17.61
1887.....	367,728	6,910	3,495	6,479	18.78	19.00	17.61
1888.....	370,689	6,443	3,379	6,854	17.38	18.22	18.48
1889.....	373,650	6,912	3,621	6,696	18.49	19.36	17.91
1890.....	376,530	6,946	3,621	7,368	18.44	19.22	19.56
1891.....	379,491	7,510	3,904	7,310	19.94	20.72	19.41
Average	369,188	6,743	3,477	6,691	18.27	17.54	18.13

* Population estimated for all but census years.

Table No. 3 shows the population of the State "estimated for all except census years," the number of births, marriages, and deaths, together with the birth, marriage, and death-rates to each 1,000 of the population for the years 1884 to 1891, inclusive, with the average for those years.

BIRTHS.

There were returned for the year 1891, 7,510 births, a larger number than ever before reported in a single year. That the birth records of New Hampshire are incomplete is shown by this as well as previous registration reports. For the past two years there has been a better return made than heretofore, but the record is still far from complete.

The birth-rate per 1,000 of the estimated population for the past eight years is as follows:

For 1884, 17.44; 1885, 17.46; 1886, 18.24; 1887, 18.78; 1888, 17.38; 1889, 18.49; 1890, 18.44; 1891, 19.94.

TABLE No. 4.

Births in Cities for 1891, with Rate per 1,000.

CITIES.	Population of 1890.	Births.	Birth-rate per 1,000.
Portsmouth.....	9,827	127	12.92
Dover.....	12,790	315	24.62
Concord.....	17,004	422	24.81
Manchester.....	44,126	963	21.82
Nashua.....	19,311	662	34.28
Keene.....	7,446	162	21.75
Rochester.....	7,306	156	21.09

Table No. 4 gives the birth-rates for the several cities of the State for the year 1891, together with the percentage of the rate to each 1,000 of the population.

TABLE No. 5.

Percentage of American and Foreign Births, by Counties, 1891.

COUNTIES.	PARENTS.			Births with percentage not stated.
	American-born.	Foreign-born.	One foreign-born.	
Rockingham	65.96	17.80	11.91	33
Strafford	44.71	40.29	14.53	20
Belknap	52.16	32.43	12.16	22
Carroll	75.98	9.42	11.59	10
Merrimack	53.68	32.36	13.47	26
Hillsborough	34.04	44.35	13.99	123
Cheshire	59.30	22.92	14.78	18
Sullivan	68.28	16.46	12.62	8
Grafton	65.65	13.37	15.81	34
Cods	31.41	45.53	15.61	40
Total for State	49.19	32.72	16.65	334

A statement of the births by counties from 1880 to 1891, inclusive, may be found in table I. A record of births by towns, giving sex, rate per 1,000 of the population and nativity of patients may be found in table III. The relative proportion of male to female births may be found in table IV. The percentage of American and foreign born parents will be found in table No. 5.

MARRIAGES.

The total number of marriages returned for the year 1891 is 3,904, or 227 more than were returned the previous year. This increase of marriage-rate, 10.36 couples, or 20.72 persons per 1,000 of the population.

TABLE No. 6.

Marriage-rates for 1882 to 1891, inclusive.

YEARS.	Marriages.	Persons married to 1,000 living.*	Number living to one mar- riage.
1882.....	3,433	19.44	103
1883.....	3,495	19.68	102
1884.....	3,292	18.34	109

DEATHS.

In the following pages will be found a brief summary of the causes of death, with comments necessary to a better understanding of the tables presented. Those desiring to study this subject more in detail should consult the registration reports. In these reports will be found the mortality record of every town in the State.

The total number of deaths returned to the registrar of vital statistics for the year ending December 31, 1891, was 7,310. This is fifty-eight less than was returned for the year 1890, but six hundred and nineteen more than the average for the past eight years. This excess over the average for the years stated is not due wholly to an actual increase in the death-rate, but to a more complete registration than existed during the earlier years of the period embraced in the comparison. Nevertheless that there has been an actual increase in the death-rate during the past two years, from epidemic influenza, or "La Grippe," is a fact fully demonstrated by the records. In 1889 there were but four deaths from this malady; in 1890 there were ninety-four, and in 1891 *one hundred and forty-three*. This increase does not by any means represent the total mortality that should really be credited to this disease, inasmuch as it is accountable for increasing the mortality of other diseases, like pneumonia, bronchitis, etc.

TABLE No. 17.

Deaths and Death-rates from 1884 to 1891, inclusive.

YEARS.	Deaths registered.	Deaths to 1,000 of population.*
1884.....	6,194	16.26

1888.....	6,854	18.48
1889.....	6,626	17.91
1890.....	7,368	19.56
1891.....	7,310	19.41
Average	6,691

* Population estimated for all but census years.

Table No. 17 gives the number of deaths returned for each year from 1884 to 1891, inclusive, with percentage to each 1,000 of the population. We stated in our last report that a death-rate of 18 — possibly a fraction over — we believe to be the average per 1,000 of the population for New Hampshire, a rate probably as low as can be found in any State in the Union, and considerably below that of some of the States. By this we do not mean to assert that New Hampshire is naturally more healthful than some other States with a higher death-rate, for in the consideration of this subject, nationality, social conditions, occupations, environments,

and many other conditions must be taken into account. The average death-rate for Europe from 1865 to 1883 was 28.1 per 1,000 of the population; for Europe, excluding Russia, it was 25.8; and for Russia alone, 35.7. For Eastern Europe, 35.7; Central Europe, 28.3; Southern Europe, 25.6; Northwestern Europe, 20.5. Massachusetts for a period of thirty years ending in 1888, had a mortality rate of 19.48; Austria for thirteen years ending in 1883, 31.0; and for about the same period the death-rate of Greece was 20.8; Denmark, 19.7; Sweden, 18.9; Ireland, 17.8; and Norway, 17.2. In our own country those States which have a reliable system of registration have a death-rate ranging from about 18 to 20 per 1,000 of the population. We can, therefore, upon the basis of our mortality records safely assert that New Hampshire is as healthful a State as any in the Union.

Table No. 18 shows the number of deaths and the death-rate per 1,000 of the population, by counties, for the years 1884 to 1891, inclusive. The highest death-rate has usually been in Hillsborough county, while the lowest, as a rule, has been in Coös; but in 1891, the highest rate was in Strafford county, and the lowest in Sullivan. The death-rate for the year by counties is as follows: Rockingham, 19.95; Strafford, 21.04; Belknap, 19.29; Carroll, 18.81; Merrimack, 19.23; Hillsborough, 20.98; Cheshire, 16.29; Sullivan, 16.18; Grafton, 17.41; Coös, 19.77.

The rate for the entire State is 19.41 per 1,000 of the population.

1889	23.70	24.16	27.38	24.76
1890	25.82	21.63	26.71	22.84
1891	22.36	24.15	26.89	26.58

* Not including deaths with month not stated, premature and still births.

Table No. 19 shows the percentages of deaths, by quarters, from 1884 to 1891, inclusive. It will be noticed that the greatest mortality usually occurs during the quarter ending with September, while for the other three quarters it is more nearly uniform. The increased rate recorded for the third quarter of the year is doubtless due to cholera infantum, which is most prevalent during July, August, and September.

The rate for the first quarter for the year 1891 is 22.36 of the total monthly; for the second quarter, 24.15; third quarter, 26.89; fourth quarter, 26.58.

TABLE No. 20.

Mortality of Males and Females compared, 1884 to 1891, inclusive.

YEARS.	Male decedents.	Female decedents.	Male decedents to 100 female decedents.	Death-rate of males to 1,000 male population.	Death-rate of females to 1,000 of female population.
1884.....	3,034	3,122	97.18	17.79	17.69
1885.....	2,948	3,194	92.29	17.28	18.09
1886.....	3,155	3,212	98.20	18.50	18.20
1887.....	3,174	3,267	97.15	18.61	18.51
1888.....	3,419	3,382	101.09	20.04	19.16
1889.....	3,253	3,389	59.88	19.07	19.20
1890.....	3,692	3,624	101.87	21.65	20.53
1891.....	3,557	3,453	102.72	19.60	17.65
Average	3,279	3,330	98.31	19.07	18.63

Table No. 20 exhibits the mortality of males and females compared for the years 1884 to 1891, inclusive. With the exception of the years 1888, 1890, and 1891, the female decedents have exceeded the males. By a comparison of the death-rates of the respective sexes to each 1,000 of the living population of that sex, it will be seen that the average mortality rate of the male population is slightly higher than that of the female.

In 1891, 3,557 male decedents and 3,453 female decedents were reported.

The death-rate of males to each 1,000 of the male population was 19.07. The death-rate of females to each 1,000 of the female population was 18.65.

TABLE No. 21.

*Deaths at Age Periods, by Percentages, from 1883 to 1891, inclusive.**

YEARS.	Under 1.	1 to 5.	5 to 10.	10 to 20.	20 to 30.	30 to 40.	40 to 50.	50 to 60.	Over 60.
1883	14.13	7.58	2.56	5.55	8.58	6.73	6.22	7.64	37.93
1884	16.22	7.36	2.61	5.30	7.93	6.26	6.33	7.75	38.38
1885	15.98	7.14	2.11	4.42	7.50	6.71	6.71	7.76	40.09
1886	16.89	7.70	2.86	4.82	7.73	6.55	6.12	7.47	38.86
1887	17.64	7.26	2.05	4.89	6.96	6.25	6.56	7.72	39.70

1889	19.44	7.71	2.66	4.64	6.56	6.15	5.93	7.63	38.40
1890	16.23	6.67	1.99	4.28	7.04	2.12	6.62	9.17	40.49
1891	18.30	7.08	2.55	4.40	6.95	6.01	6.29	8.15	40.25

* Not including those with age not stated, premature and still births.

Table No. 21 shows the deaths at age periods by percentages from 1883 to 1891, inclusive.

This table is interesting in showing how uniformly the percentages are maintained for a certain age period from year to year, thus giving one of many proofs that the factors which bear upon the mortality of a State are governed by well defined laws.

TABLE No. 22.

*Deaths at Different Periods, compared with the number Living at the Same Period, 1891.**

	Deaths, 1891.	Persons living at same ages, census of 1880.	Death-rate per 1,000.
Under 1 year	1,264	6,141	205.82
Under 5 years	1,753	30,573	57.34
20 to 30 years	480	63,252	7.71
All others	4,791	253,166	18.90
All ages	7,024	376,530 †	18.65

* Excluding still births and premature births. † Census of 1890.

Table No. 22 exhibits the number of deaths at different age periods compared with the number living at the same period, based upon the census of 1880, with the exception noted in the table. This table shows a death-rate per 1,000 of the population under one year of age, of 205.82 as against 186.61 for the preceding year; and under five years of age, 57.34 as against 52.79 for 1890; between twenty and thirty, 7.71 in 1891, and 7.77 in 1890, practically the same; all others, 18.90 in 1891, and 19.74 in 1890; for all ages the rate was 18.65 in 1891, and 18.87 the preceding year.

The difference in the death-rate between table No. 17 (19.41) and that of table No. 22 (18.65) is due to the exclusion of still births and premature births from the latter, while the former includes both.

* Excluding still births and premature births.

Table No. 23 shows the number of deaths at different age periods by sex, from 1885 to 1891, inclusive. In the year 1891 there were returned 1,226 deaths of children under one year of age, not including still births and premature births; 489 between one and five; 176 between five and ten; 304 between ten and twenty; 480 between twenty and thirty; 415 between thirty and forty; 435 between forty and fifty; 563 between fifty and sixty; 833 between sixty and seventy; 1,037 between seventy and eighty; 758 between eighty and ninety; 149 between ninety and one hundred; 3 over one hundred; and 118 with age not stated.

Compared with previous years it will be seen that there has been almost an alarming increase of deaths in children under one year of age, which is largely accounted for by an increase of deaths from diarrheal diseases, chiefly cholera infantum. The variation in some of the other age periods though considerable is not so marked as in the instance referred to.

Table No. 24 shows the percentages of deaths, by age periods and sex, to the total mortality from 1884 to 1891, inclusive. Tables Nos. 23 and 24 are interesting and instructive inasmuch as they give the number of deaths and the percentage to the total mortality by age periods, for the seven years embraced in the tables. There are no other tables that so emphatically exhibit the large mortality that annually occurs among children under one year of age. It will be seen that nearly one fourth of all the deaths in the State for the year 1891 were of children under five years of age. This excessive mortality among the young offers a subject for reflection and study for those who are interested or engaged in efforts to reduce the mortality rate of the State. It is admitted by those who have given the subject any attention that so large a death-rate among children is preventable, and that the means are at the command of the individual and the public to reduce these figures very materially. This view is emphatically corroborated by a detailed exhibit of the causes of death among children.

TABLE No. 24.

Half-years'.....				623						1,119		
Percentages....				35.76						64.24		
Total deaths.							1,742					

* Not including deaths with month not stated.

This table represents the mortality of children under five years of age, by seasons, for the year 1891. The greatest mortality of the year occurred in the quarter embracing the months of July, August, and September, and was 41.72 per cent of the total mortality among children, as against 17.73 per cent for the first quarter, 18.02 per cent for the second, and 22.51 per cent for the last quarter of the year. There were 1,742 deaths among children under five years of age during the year, or 128 more than were recorded in 1890.

For the latter year the percentages were as follows: First quarter, 19.95; second quarter, 15.92; third quarter, 44.23; last quarter, 19.88.

TABLE No. 26.

*Total Deaths by Seasons, 1891.**

	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.
Months	533	466	565	538	604	547	579	680	622	563	496	800
Quarters	1,564				1,689				1,881		1,859	
Percentages	22.37				24.15				26.89		26.58	
Half-years			3,253						3,740			
Percentages.			46.52						53.48			
Total deaths.					6,993							

* Not including deaths with month not stated, premature and still births.

This table gives the total number of deaths at all ages, by seasons, for the year 1891. There was a total of 6,993 deaths, not including those with month not stated, premature and still births. The greatest mortality was in the month of December, 800, and the least in February, 466. The percentages, by quarters, were as follows: First quarter, 22.37; second quarter, 24.15; third quarter, 26.89; last quarter, 26.58.

The percentage for the first half of the year was 46.52; for the last half, 53.48.

TABLE No. 27.

Nativity of Persons Deceased for 1891, by Counties.

COUNTIES.	Total deaths.*	NATIVE-BORN.		FOREIGN-BORN.	
		Deaths.	Percentages.	Deaths.	Percentages.
Rockingham	991	784	89.49	92	10.50
Strafford.....	809	644	85.08	113	14.92
Belknap	392	286	92.25	24	7.74
Carroll	341	293	96.69	10	3.30

Cheshire	482	390	89.24	47	10.75
Sullivan	280	229	92.71	18	7.28
Grafton.....	648	539	93.90	35	6.09
Coös.....	459	311	81.41	71	18.58
Total	7,310	5,637	86.52	878	13.47

* Including those whose nativity was not recorded. In the calculations of percentages, the rates are not given to the *total* reported deaths, but only to the total of those cases where the nativity was stated.

This table gives the nativity of the decedents for the year 1891, together with the percentages of each, by counties. The greatest number of foreign-born decedents, as well as the highest rate, was in Hillsborough county, where there is a larger foreign-born population, being 373 or 21.36 per cent; Coös follows with 18.58; Strafford, 14.92; Merrimack and Cheshire, 10.75 each; Rockingham, 10.50; Belknap, 7.74; Sullivan, 7.28;

Grafton, 6.09; Carroll, 3.30. The total foreign-born decedents for the State were 878, a rate of 13.47. The rate for the preceding year was 13.55.

TABLE No. 28.

Nativity of Persons Deceased from 1884 to 1891, inclusive.

1890.....	7,368	5,672	86.45	889	13.55
1891.....	7,310	5,637	86.52	878	13.47

*Including those whose nativity was not recorded. In the calculations of percentages, the ratios are not given to the *total* reported deaths, but only to the total of those cases where the nativity was stated.

Table No. 28 shows the number of native and foreign-born decedents in the State for each year from 1884 to 1891, inclusive, with percentages of each.

Of a total of 7,310 deaths in the State returned for the year 1891, 5,637, or 86.52 per cent, were native-born, and 878, or 13.47 per cent, foreign-born.

TABLE No. 29.
Deaths in 1891 of Persons Aged One Hundred Years, or more.

Date of death.	NAME.	AGE.			Place of death.	Birthplace.	Single, married, or widowed.
		Years.	Months.	Days.			
June 26	Betsey Graves Wam	101	...	2	Walpole	Walpole	Widow.
July 22.....	Ellen Scott.....	104	Portsmouth...	Ireland.....	Widow.
September 11	Elizabeth Kidder	102	1	14	Stewartstown.	New Hampshire..	Widow.

CAUSES OF DEATH.

There were returned for the year 1891, 7,310 deaths, of which 3,717 were males, 3,544 females, and 49 with sex not stated. In 353 cases the cause of death was not specified.

TABLE No. 30.

Causes of Death, by Classes, from 1884 to 1891, inclusive.

	1884.	1885.	1886.	1887.	1888.	1889.	1890.	1891.
I. — Zymotic diseases...	907	890	1,095	1,073	1,097	1,172	1,155	1,301
II. — Constitutional diseases.....	1,276	1,271	1,284	1,222	1,200	1,114	1,309	1,095
III. — Local diseases.....	2,594	2,637	2,610	2,731	2,994	2,852	3,146	3,149
IV. — Developmental diseases.....	857	848	948	952	1,016	1,041	1,150	1,141
V. — Violent deaths....	201	225	206	218	234	233	271	271

This table gives the causes of deaths, by classes, for the years 1884 to 1891, inclusive.

There were attributed to the zymotic diseases 1,301 deaths; constitutional diseases, 1,095; local diseases, 3,149; developmental diseases, 1,141; and to violent deaths, 271. There was a marked increase of deaths in the zymotic class over the number reported in 1890. Under constitutional diseases there were returned 204 less than for the preceding year. Under the other classes the variation was small. In class five, violent deaths, there is remarkable uniformity from year to year.

TABLE No. 31.

*Percentage of Causes of Death, by Classes, from 1884 to 1891, inclusive.**

YEARS.	CLASSES.				
	Zymotic.	Constitutional.	Local.	Developmental.	Violent deaths.
1884	15.9	22.4	45.7	12.3	3.5
1885	13.9	22.2	46.0	12.2	3.6
1886	18.2	21.4	43.4	13.4	3.4
1887	17.9	20.4	45.7	12.1	3.6
1888	17.4	19.1	47.6	12.0	3.7
1889	19.1	18.2	46.5	12.3	3.8
1890	17.0	19.3	46.5	13.1	4.0
1891	19.5	16.4	47.2	12.8	4.0

* Excluding deaths from unspecified causes, premature and still births.

Table No. 31 gives the percentages of causes of death, by classes, excluding deaths from unspecified causes, premature and still births, from the year 1884 to 1891, inclusive. This table presents substantially the same information as table No. 30, but in the form of percentages. The relative fatality of each class of diseases is vividly shown. The increase of the percentage of deaths from zymotic diseases during the period included in the table as well as the decrease of constitutional diseases, is especially noticeable.

TABLE No. 32.

Causes of Death, by Classes and Counties, 1891.

Sullivan.....	34	12.14	41	14.64	146	52.14	47	16.79	9	3.21	3	1.07	280
Grafton.....	108	16.66	96	14.81	300	46.29	100	15.43	30	4.63	14	2.16	618
Coös.....	123	26.79	41	8.93	183	39.87	56	12.20	29	6.32	27	5.88	459
Total.....	1,301	17.79	1,095	14.98	3,149	48.08	1,141	15.61	271	3.71	353	4.83	7,310

Table No. 32 gives the causes of death, by classes and counties, for 1891, with the percentages of each to the total number of deaths, and including deaths from unspecified causes, premature and still births, which accounts for the differences in the percentages in tables Nos. 31 and 32; the former gives the percentage of each class to the total number of specified causes, excluding premature and still births, while the latter gives the percentage of each class to the total number of all classes. The highest percentage in the zymotic class is in Coös county, 26.79; Belknap, 22.96; Hillsborough, 19.26; Strafford, 19.16; Grafton, 16.66; Rockingham, 16.65; Merrimack, 15.25; Cheshire, 14.11; Sullivan, 12.14; and the lowest in Carroll county, 10.55. The percentage of deaths in this class for the entire State was 17.79 to the total mortality, as against 15.67 for 1890.

The percentages in the class of constitutional diseases do not vary so much in the different counties, the highest rate being 17.01 in Cheshire county, followed by 16.44 in Strafford, 16.33 in Belknap, 16.30 in Merrimack, 15.23 in Hillsborough, 14.81 in Grafton, 14.64 in Sullivan, 14.37 in Carroll, 13.72 in Rockingham, and the lowest, 8.93, in Coös. The percentage of this class for the whole State was 17.76 in 1890, and 16.63 the previous year.

In the class of local diseases the highest rate was in Sullivan, 52.14; Carroll, 50.73; Grafton, 46.29; Cheshire, 46.27; Merrimack, 45.85; Rockingham, 45.01; Belknap, 42.35; Coös, 39.87; Hillsborough, 39.14; Strafford, 38.31. The rate for the State in this class was 43.08.

In the developmental class the rate for the State was 15.61. The variations in the percentages by counties are much less than in the other classes, the highest being 16.93, in Strafford and Merrimack counties, and the lowest, 12.20, in Coös.

There were 271 deaths from violent causes, and 353 from unspecified causes.

TABLE No. 33.

Mortality from Prominent Zymotic Diseases from 1884 to 1891, inclusive.

YEARS.	DISEASES.												
	Cholera infantum.	Croup.	Diarrhea.	Diphtheria.	Dysentery.	Erysipelas.	Fever, cerebro-spinal.	Fever, typhoid.*	Measles.	Pertussis.	Scarlatina.	Septicæmia.	Total.
1884.....	266	49	53	110	80	19	25	137	3	14	52	27	835
1885.....	219	74	59	78	40	25	20	136	45	25	53	38	812
1886.....	362	64	38	156	79	18	26	194	18	26	21	27	1,029
1887.....	336	84	38	177	53	20	34	134	39	21	26	30	992
1888.....	370	94	50	103	63	36	34	150	55	23	34	29	1,041
1889.....	353	88	68	210	67	27	25	161	16	47	18	29	1,109
1890.....	399	64	50	164	48	29	...	143	9	26	16	57	1,005
1891.....	486	56	46	160	51	43	...	170	19	27	13	38	1,109
Average.....	349	72	50	145	60	27	21	153	26	26	29	34	992

* Including fever, bilious, intermittent, malarial, and typho-malarial fevers.

Table No. 33 exhibits the mortality from prominent zymotic diseases. Cholera infantum was the cause of more than one third of all the deaths of this class, 486 in a total of 1,109, and 87 more than were returned in 1890. The increase of the number of deaths from this disease during the period embraced in the table is especially noticeable.

Typhoid fever shows an increase in number of decedents over those returned for the preceding four years. Croup, diphtheria, diarrhea, scarlet fever, and septicæmia show a falling off from the numbers reported for 1890; dysentery, measles, and whooping cough a slight increase.

The average mortality from the zymotic diseases for the past eight years is 992 as against 1,109 for 1891.

TABLE No. 34.

Mortality from Principal Constitutional Diseases from 1884 to 1891, inclusive.

YEARS.	DISEASES.									
	Dropsy.	Anæmia.	Cancer.	Mortification.	Rheumatism.	Scrofula.	Tabes mesenterica.	Phthisis (pulmonary).	Hydrocephalus.	Tubercular meningitis.
1884.....	80	43	213	18	26	26	4	865	27	*
1885.....	90	32	212	24	28	22	2	857	25	*
1886.....	83	28	206	27	47	16	11	809	33	19
1887.....	79	17	218	29	47	16	7	766	23	16
1888.....	75	34	203	22	43	21	14	742	30	13
1889.....	62	40	213	21	43	22	13	651	21	24
1890.....	53	28	276	33	30	15	6	825	13	30
1891.....	41	41	213	2	24	11	19	695	22	15
Average.....	70	33	219	22	36	19	9	776	24	15

* Not classed separately.

The mortality from the chief constitutional diseases from 1884 to 1891, inclusive, is shown in table No. 34. Phthisis, as always, stands at the head, numerically, as the cause of death. There were recorded in 1891, 695 deaths from this disease, 120 less than were returned the preceding year. A close study of this and other tables indicates that the mortality from phthisis is being somewhat reduced in New Hampshire.

There was a falling off of 63 deaths from cancer from the number returned in 1890, the mortality for 1891 being 213. The annual uniformity of the number of decedents from this disease is striking.

TABLE No. 35.

Mortality from Principal Local Diseases from 1884 to 1891, inclusive.

YEARS.	DISEASES.											
	Apoplexy.	Paralysis.	Convulsions.	Cephalitis.*	Brain disease.	Heart disease.	Bronchitis.	Pneumonia.	Enteritis.	Gastritis.	Peritonitis.	Liver disease.
1884	192	248	99	120	134	507	78	436	69	44	61	63
1885	206	278	93	133	122	489	112	504	57	49	44	63

											167	2,475

* Meningitis and cerebritis included.

Table No. 35 gives the mortality from the principal local diseases from 1884 to 1891, inclusive. The annual average for the eight years is 2,475, the total for 1891 being 2,743.

Pneumonia is the predominating disease in this class. The number of deaths returned from this cause in 1891 was 673, 30 less than was reported for the preceding year.

Next in order of fatality comes heart disease with 572 deaths for the year 1891; then follows apoplexy with

283 deaths; paralysis, 241; Bright's disease, 182; bronchitis, 180; cephalitis, 161; brain disease, 130; convulsions, 78; enteritis, 73; peritonitis, 68; liver disease, 55; and gastritis, 47.

TABLE No. 36.

Mortality from Principal Developmental Diseases from 1884 to 1891, inclusive.

YEARS.	DISEASES.									
	Still-born.	Debility, infantile.	Debility, premature birth.	Malformation.	Teething.	Innutrition.	Childbirth.	Old age.	Atrophy and debility.	Total.

DIAGRAM NO. 1. — SHOWING THE COMPARATIVE MORTALITY, BY ABSOLUTE NUMBER OF DECEDENTS, FROM TWENTY PROMINENT CAUSES OF DEATH DURING YEAR ENDING DECEMBER 31, 1891.

CONSUMPTION.

Table No. 37 gives a comparative view of the mortality from twenty prominent causes of death from 1884 to 1891, inclusive. This table together with the diagram that follows is interesting in studying the relative positions of the more prominent causes of death, from year to year. Consumption, as it always has done, heads the list, and is responsible for more deaths than any other disease. The long black line at the head of the diagram is of appalling significance. There were returned in 1891, 695 deaths from this disease. Next in order comes pneumonia. This disease has stood second among the causes of mortality in this State for the past four years. In 1887 it was third, and in 1886 and 1884 it was fifth in the order of fatality. Heart disease ranks third in 1891, with a mortality of 572; apoplexy and paralysis fourth, with 524; cholera infantum went from the sixth position, which it has hitherto held, up to the fifth, with a mortality of 486; old age is sixth, with 385, a lower position than has been heretofore recorded; cancer decreased from the seventh position to the eighth, with a total of 213 deaths; diphtheria shows a mortality of 160 for 1891, and is thirteenth on the list; accident and negligence is seventh, with 220 deaths; typhoid fever is eleventh, with 170 deaths; cephalitis twelfth, with 161; Bright's disease fourteenth, with 147; atrophy and debility ninth, with 208; croup twenty-first, with 56; infantile debility seventeenth, with 104; convulsions twentieth, with 78; innutrition nineteenth, with 90; and influenza fifteenth, with 143. The relative positions of these diseases for the past eight years may be seen by studying table No. 37.

TABLE No. 38.

Mortality from Consumption from 1884 to 1891, inclusive.

YEARS.	Deaths.	Percentages of deaths to deaths from all causes.	Death-rate per 10,000 living population.
1884.....	865	14.01	24.18
1885.....	857	13.82	23.68
1886.....	809	12.58	22.17
1887.....	766	11.82	20.82
1888.....	742	10.82	20.01
1889.....	651	9.72	17.42
1890.....	825	11.19	21.91
1891.....	695	9.51	18.31
Totals.....	6,210

The mortality from consumption, the percentage of the same to the total mortality, and the rate per 10,000 of the population is shown in the above table, for the years 1884 to 1891, inclusive. It will be seen that there was a considerable diminution in the mortality from this disease between the years 1884 and 1889, but was largely increased in 1890; but in 1891 it again fell to nearly the lowest figures recorded during the past eight years. In commenting upon the returns of 1890 we said: We have entertained the belief that an increased knowledge of the nature of consumption and the measures necessary to restrict and prevent it may have had some influence in causing this reduction. The increased

mortality in 1890 does not weaken our opinion, and is to be accounted for, to a large extent if not wholly, by the climatic or other causes to which has been due epidemic influenza or la grippe. That this condition has been a very marked and important factor in causing the increased mortality from certain diseases, has already been shown; therefore we are disposed to attribute the large increase in the deaths from consumption in 1890, to the climatic conditions of this particular period. The great force of the epidemic of influenza which extended in 1891 seems to have been particularly fatal to consumptives in the preceding year, doubtless owing to the fact that a large number of persons well advanced in phthisis succumbed to the two diseases, leaving a far less number of consumptives unable to resist the conditions of 1891.

Table No. 39 shows the mortality from consumption, by counties, with percentages to total mortality, from 1884 to 1891, inclusive. Strafford county has the highest rate for 1891, 11.62; Belknap, 11.23; Cheshire, 10.16; Hillsborough, 10.06; Carroll, 9.38; Merrimack, 9.36; Grafton, 8.79; Rockingham, 8.57; Sullivan, 7.15; Coös, 6.10. The average for the State to the total mortality for 1891 was 9.51.

The mortality from consumption in the cities of the State is shown in the following tables.

TABLE No. 40.

Deaths from Pulmonary Consumption, by Seasons, Ages, and Nativity, 1891, for the City of Manchester.

Months	January. 11	February. 9	March. 4	April. 11	May. 8	June. 9	July. 7	August. 6	September. 10	October. 5	November. 9	December. 9	Total.	American.	Foreign.	Not stated.
Quarters	24			28			23			23			98			
Ages	Under 10. 9	10 to 15. 4	15 to 20. 11	20 to 30. 28	30 to 40. 16	40 to 50. 19	50 to 60. 6	60 to 70. 2	70 to 80. 3	Over 80. Not stated.						
Nativity														46	44	8
Males														44		
Females														54		

Percentage to total mortality of city, 10.40.

Table No. 40 gives the deaths from consumption, by months, seasons, ages, and nativity, in the city of Manchester for 1891. Total number of deaths from this cause for the year was 98 as against 106 in 1890. Of these 44 were males and 54 females; 46 were American-born, 44 foreign-born, and 8 nativity not stated. The greatest fatality was in April and January, 11 each of those months; September, 10; February, June, November, and December, 9 each; May, 8; July, 7; August, 6; October, 5; March, 4.

Nine of the decedents were under 10 years of age; 4 between 10 and 15; 11 between 15 and 20; 28 between

20 and 30; 16 between 30 and 40; 19 between 40 and 50; 6 between 50 and 60; 2 between 60 and 70; and 3 over 70. The rate to the total mortality of the city was 10.40 per cent.

TABLE No. 41.

Deaths from Pulmonary Consumption, by Seasons, Ages, and Nativity, 1891, for the City of Concord.

Months	January. 3	February. 3	March. 2	April. 1	May. 4	June. 4	July. 2	August. 3	September. 2	October. 4	November. 2	December. 2	Total.	American.	Foreign.	Not stated.

1890.....	73	48	9	10	11	35	46	45	79	106	127	107	7	703
1891.....	73	43	15	6	11	43	31	38	74	109	126	95	9	673

The mortality from pneumonia from 1884 to 1891, inclusive, by age periods is given in table No. 52. It will be seen that for the entire period the mortality is greatest in the age period between 70 and 80. A comparison of these figures with the number of persons living in the different age periods shows pneumonia to be an exceedingly fatal disease to the aged.

TABLE No. 53.

Mortality from Pneumonia, by Months and Quarters, from 1884 to 1891, inclusive.

YEARS.	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Not stated.
1884	55	55	51	52	32	13	14	11	5	28	51	67	2
1885	53	59	101	95	35	25	13	10	10	33	38	32	...
1886	32	44	73	51	51	33	22	18	18	24	46	54	...
1887	71	73	85	85	49	17	13	13	14	34	47	54	1
1888	72	95	75	73	76	24	16	23	21	43	36	72	2
1889	69	66	79	102	51	22	15	19	16	53	41	49	...
1890	213	74	69	43	47	35	18	9	23	23	69	79	1
1891	73	60	82	72	95	41	13	7	14	23	37	152	4
Total	638	526	615	573	436	210	124	110	121	261	365	559	
Quarters	1,779			1,219			355			1,185			

The above table shows the mortality from pneumonia, by months and quarters, from 1884 to 1891, inclusive. For the year 1891 the greatest number of deaths occurred in December, but for the eight years included in the table in January. The smallest number for the year was in August, as well as for the period given.

BRAIN DISEASES.

TABLE No. 54.

Mortality from Brain Diseases from 1884 to 1891, inclusive.

YEARS.	DISEASES.						
	Cephalitis.*	Apoplexy.	Paralysis.	Insanity.	Convulsions.	Brain diseases.	Total.
1884.....	120	192	248	22	99	134	815
1885.....	133	206	278	27	93	122	859
1886.....	141	220	249	24	71	127	832
1887.....	117	210	253	25	64	121	790
1888.....	143	243	273	37	88	112	896
1889.....	151	259	196	35	76	126	843
1890.....	186	263	251	28	65	140	933
1891.....	161	283	241	44	78	130	917
Average	144	234	249	30	79	129	861

* Meningitis and Cerebritis included.

Table No. 54 exhibits the mortality from brain diseases for eight years. In 1891 there were returned 917 deaths from brain diseases under the several classifications given in the table. Under apoplexy there were returned 283; paralysis, 241; cephalitis, 161; brain diseases not otherwise classified, 130; convulsions, 78; insanity, 44.

DIARRHEAL DISEASES.

TABLE No. 55.

Mortality from Diarrheal Diseases from 1884 to 1891, inclusive.

YEARS.	DISEASES.					Total of diarrheal diseases.
	Cholera infantum.	Cholera morbus.	Diarrhea.	Dysentery.	Enteritis.	
1884	266	21	52	80	69	488
1885	219	20	40	40	57	376
1886	362	14	38	79	53	546
1887	336	16	38	53	57	500
1888	370	8	50	63	39	530
1889	353	12	68	67	56	556
1890	399	12	50	63	524
1891	486	16	46	51	73	672
Average	349	15	42	60	58	524

There were 672 deaths from diarrheal diseases in 1891, as against 524 in 1890—148 more than for the latter year. Cholera infantum was responsible for 486 deaths; enteritis, 73; dysentery, 51; diarrhea, 46; cholera morbus, 16.

CHOLERA INFANTUM.

TABLE No. 56.

Mortality from Cholera Infantum from 1884 to 1891, inclusive.

YEARS.	Deaths.	Percentage of deaths to deaths from all causes.	Death-rates per 10,000 living (estimated population).
1884	266	4.29	7.41
1885	219	3.53	6.05
1886	362	5.63	9.92
1887	336	5.18	9.18
1888	370	5.39	9.98
1889	353	5.27	9.44
1890	399	5.41	10.59
1891	486	6.64	12.08
Average	349

Table No. 56 exhibits the mortality from cholera infantum from 1884 to 1891, inclusive; also the percentage of deaths from this disease to deaths from all causes, and the rate to each 10,000 of the living population. The percentages show graphically the increase this disease is making. The number of deaths from it being in 1891, 486, or 137 greater than the average for the past eight years.

TABLE No. 57.

Mortality from Cholera Infantum, by Ages, from 1884 to 1891, inclusive.

YEARS.	Under 1.	1 to 5.	5 to 10.	10 to 15.	15 to 20.	20 to 30.	30 to 40.	40 to 50.	50 to 60.	60 to 70.	70 to 80.	Over 80.	Unknown.	Total.
1884.....	214	48					1	1						2266
1885.....	186	33												310
1886.....	283	77	2											362
1887.....	284	51												1336
1888.....	298	70												2370
1889.....	297	54	1											1353
1890.....	343	52	4											399
1891.....	409	74	3											486

The above table shows the mortality from cholera infantum, by ages, from 1884 to 1891, inclusive. The largest number reported in any year was 486, in 1891. This table shows most emphatically that this disease is one of early childhood, chiefly confined to the first year of life.

TABLE No. 58.
Cholera Infantum, by Cities.

CITIES.	1883.	1884.	1885.	1886.	1887.	1888.	1889.	1890.	1891.
Manchester	131	112	88	122	148	117	86	146	122

Concord.....	9	12	5	7	8	11	13	8	25
Keene.....	9	6	2	7	5	2	8	5	5
Rochester									8
Total for cities.....	175	157	132	187	198	197	164	235	251
Total for State.. ...	278	268	219	362	336	370	353	399	486

This table shows the mortality from cholera infantum in the cities of the State. Of the 486 deaths from this disease in 1891, 235 occurred in the cities. Manchester gives a mortality of 122, which is not only the largest number returned from any city, but much the largest in proportion to the population.

TABLE No. 59.

Cholera Infantum by Ages, Sex, and Months, particularly showing the number of Decedents in the Cities and Towns returning the greatest Mortality from the Disease.

TOWNS.	SEX.	AGES.		MONTHS.												Grand total.	
		Under 1.	1 to 5.	5 to 10.													
				January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.		Unknown.

1889.....	7	86	68	18	13	10	3	3	..	1		1	210
1890.....	6	64	45	26	10	3	4	3		1	2		164
1891.....	5	74	48	17	7	2	4	...		1	...		2	160

Table No. 61 shows the mortality from diphtheria by age periods from 1884 to 1891, inclusive. One hundred and sixty deaths were reported from this disease for the year 1891,—four less than were returned the preceding year. The greatest mortality from this cause during the past eight years was in 1889, when 210 deaths were reported. It will be seen by the table that the greatest number of deaths occurred in children between the ages of 1 and 5 years; the next largest number between 5 and 10. This disease is largely confined to childhood. It is not peculiar to any particular season of the year. In 1891, 12 died in January, 15 in February, 13 in March, 11 in April, 17 in May, 12 in June, 5 in July, 12 in August, 19 in September, 14 in October, 14 in November, 13 in December, and 3 unknown. Eighty-nine of the decedents were males, 70 females, and 1 sex not stated.

[illegible]

* Classed with males.

CROUP.

TABLE No. 63.

Mortality from Croup from 1884 to 1891, inclusive, by Ages.

YEARS.	Under 1.	1 to 5.	5 to 10.	10 to 15.	15 to 20.	20 to 30.	30 to 40.	40 to 50.	50 to 60.	60 to 70.	70 to 80.	Over 80.	Unknown.	Total.
1884	8	35	6											49
1885	20	41	9			1	2		1					74
1886	13	40	10	1										64
1887	26	48	7	2							1			84
1888	16	67	9				1				1			94
1889	11	65	11	1										88
1890	16	41	6	1										64
1891	11	32	10	2										156

The mortality from croup for the past eight years is shown in table No. 63. In 1891 there were 56 deaths from this cause, a less number than has been reported in any one year since 1884. This is also a disease of childhood chiefly, as will be seen by a study of the table.

TABLE No. 64.

Mortality from Croup and Diphtheria from 1884 to 1891, inclusive.

YEARS.	Deaths.			Percentages of deaths to deaths from all causes.			Death-rates per 10,000 living.		
	Croup.	Diphtheria.	Total.	Croup.	Diphtheria.	Total.	Croup.	Diphtheria.	Total.

Average	72	145	216						

TYPHOID FEVER.

TABLE No. 65.

Mortality from Typhoid Fever from 1884 to 1891, inclusive.

YEARS.	Deaths.	Percentages of deaths to deaths from all causes.	Death-rates per 10,000 living (estimated population).
1884	187	2.21	3.81
1885	186	2.19	3.75
1886	104	3.01	5.31
1887	134	2.06	3.64
1888	150	2.18	4.04
1889	161	2.40	4.30
1890	143	1.94	3.70
1891	170	2.42	4.48
Total	1,225		
Average	153		

The above table shows the mortality from typhoid fever from 1884 to 1891, inclusive, with percentage to deaths from all causes and the death-rate to each 10,000 of the living population. In 1891 there were returned 170 deaths from this disease, a larger number of decedents than had been recorded in any one year since 1886. The average yearly deaths for the past eight years is 153.

TABLE No. 66.
